# Immunoassays

Enzyme-Linked Immunosorbent Assay (ELISA) combines the specificity of antibodies with the sensitivity of enzyme catalysis-multiplied signal.

The ability of the antibodies to recognize individual target molecules and bind them with high affinity is joined with our ability to prepare antibodies of the required characteristics by modern technologies. It makes immunoanalytical or immunodiagnostic methods powerful tools for the determination

of specified molecule concentration in very complex biological matrices like serum/ plasma, cerebrospinal fluid, bronchoalveolar lavage, urine, breast milk, tissue extracts, cell culture media etc. The method is characterized by high sample throughput and does not require expensive equipment in the laboratory. BioVendor's use of modern immunoassay formats has enabled high assay sensitivity, with an emphasis on superior analytical characteristics and user-friendly kit performance.

## Features

### Format

Abroad spectrum of ELISA or ELISA-like assay formats is used. You can find a short description in the catalog and a detailed description in the product datasheet for each kit.

### Samples

Follow instructions for sample collection, preparation and storage as described in the product datasheet referring to a particular kit.

### Applications

See the product datasheet to learn which of the biological matrices such as serum/plasma, cerebrospinal fluid, bronchoalveolar lavage, urine, breast milk, tissue extracts, cell culture media, etc. were evaluated for a particular kit.

### Specificity

We offer ELISAs applicable for samples of human origin as well as the most commonly used animal models (mouse, rat and others). The main application is indicated by a product name. Read the product datasheet referring to a particular kit to find full cross-reactivity data.

### Storage

The kits are typically stored at 2~8 °C, some of them at -20°. Please follow the storage conditions that are indicated on the kit packaging label.

### Regulatory Status

- RUO These kits can be used research use only
- CE IVD Selected kits for in-vitro diagnostics (IVD) carry the CE mark and comply with IVD Directive requirements. They are labeled with IVD CE mark and are approved to be used as in vitro diagnostics in the EU countries or in the countries where this registration is accepted. In the countries where this registration is not valid, the same kits have to be used as Research-Use-Only products. This limitation applies particularly, but not exclusively, to the USA, Canada and Japan.

### Quality Control

BioVendor's ELISA kits pass quality control tests and are provided with a Certificate of Analysis.

# Point of Care Testing (POCT)

## Human MxA

Lateral Flow Test

Product Name	Bi-VirTest
Cat. No.	BI005-10
Assay Formate	Lateral Flow Test
Quantitative Mesuring Range	5-200ng/ml
Sample Type	Capillary Blood
Size	10 tests / package
Regulatory Status	CE IVD
Cut-off	21 ng/ml
Clinical Sensitivity and Specificity	≥ 92% and 95%
Application	Diferentiation between viral and bacterial infections Viral infections: acute phase disease monitoring
Assay Time	15 minutes

## LFT Reader

Product Name	Bi-Reader
Regulatory Status	CE IVD
User	Professional Use; Lab and POCT
Test format	Test cassette or test strip
Lighting	Wavelength 525 nm
Configuration	RFID technology
Dimensions L x W x H	41 x 41 x 40 mm
Weight	approx. 40 g
Power supply	3 batteries CR2032 (3V/230 mAh) or Cube Re-ader specific power cord (optional article) also usable for data transfer to PC/laptop

# Antibodies

## Monoclonal Antibodies

Monoclonal antibodies are prepared using hybridoma technology, fusing the spleen cells of immunized mice with the cells of the mouse myeloma Sp2/0 cell line. The resultant hybridoma cells are selected according to their ability to produce antibodies of the required specificity. The hybridoma cells producing the highest quality antibodies are then cloned and cultivated. Monoclonal antibodies are protein-G or protein-A purified.

### Features

#### Formulation

All antibodies are shipped as lyophilized materials. The antibodies are 0.4 µm filtered prior to lyophilization.

#### Reconstitution

Use deionized water to reconstitute the lyophilized antibodies.

#### Easy Conjugation

To make antibody conjugation or chemical immobilization easy, PBS buffer is used as the lyophilization medium. The buffer is free of azide or any NH<sub>2</sub>-group containing compounds.

## Polyclonal Antibodies

Polyclonal antibodies are prepared by immunizing experimental animals using optimized immunization protocols. Sera from immunized rabbits, goats, cows or sheep or the yolk from chicken eggs provide the source of specific antibodies. The host animal species is specified in the corresponding product name subtitle. Polyclonal antibodies are affinity purified on immunizing antigen-immobilized columns.

#### Storage

Store the lyophilized antibodies at -20 °C.

#### Quality Control Test

Antibody content determination:

Protein concentration determined by BCA method using BSA as a calibrator

Antibody purity determination:

SDS PAGE (12% PAGE, reduction buffer, 5 µg/lane)

Antibody titer determination:

Indirect ELISA

See the website [www.biovendor.com](http://www.biovendor.com) to select proper antibody among following applications:

**ELISA Enzyme** Linked Immunosorbent Assay  
**IHC** Immunohistochemistry  
**WB** Western Blotting  
**IF** Immunofluorescence  
**IP** Immunoprecipitation

# Proteins

The isolation of many natural proteins at a production scale is ineffective or even impossible for many reasons. The use of modern recombinant protein technologies has overcome many of the limitations and enabled the preparation of a wide range of proteins facilitating research among the scientific community. From among the many production designs, we have chosen to take advantage of the bacterial and mammalian cell expression systems.

## HEK293 Cell-Expressed Recombinant Proteins

Recombinant proteins produced by mammalian HEK293 cells exhibit superior features including their glycosylation pattern and proper folding and subsequent solubility in buffers of physiological pH and ionic strength. As a whole they possess features making them the most similar to natural proteins with respect to their structure, antigenicity and biological activity.

## E.coli-Expressed Recombinant Proteins

E.coli bacterial expression systems are widely used to produce recombinant proteins easily, quickly, cost effectively and in large quantity. Such is usually the primary method of choice to produce recombinant proteins of small size and unglycosylated proteins. Such proteins often possess antigenicity and biological activity meeting all customer requirements.

## Isolated Natural Proteins (Native)

Human or animal body fluids and tissues are traditional sources of raw materials for the isolation of proteins occurring in concentrations high enough to make their isolation possible and effective. Using deliberately selected, sophisticated purification methods, isolated proteins maintain most of their natural biological functions. HPLC techniques, ion-exchange chromatography, size exclusion chromatography or affinity chromatography are all employed.

Special sequences (tags) enabling easy purification and determination are often linked to the C-terminus or N-terminus of the protein sequence. An effective combination of HPLC techniques including ion-exchange chromatography, size exclusion chromatography, Ni-NTA chromatography or antibody immobilized affinity chromatography is used to purify the recombinant proteins.

## Features

### Formulation

All proteins are shipped as lyophilized materials. The proteins are 0.4 µm filtered prior to lyophilization. The buffer used as a lyophilization medium is specified in the corresponding product datasheet. No antimicrobial agents are added. No inert carrier proteins are added.

### Reconstitution

Follow instructions as described in the product datasheet referring to a particular protein, otherwise precipitation, denaturation or degradation of the protein may occur. Read the product datasheet carefully prior to beginning your work with the protein.

### Storage

Store the lyophilized proteins at -20 °C. Stability and storage of reconstituted protein is specified in the corresponding product datasheet.

### Quality Control Test

Protein content determination: Protein concentration determined by BCA method using BSA as a calibrator. Protein purity determination: SDS PAGE (typically 12% PAGE, reduction buffer, 5 µg/lane). Protein identity confirmation: Western blotting using anti-tag- and anti-protein-sequence detection antibodies.

### Biological Activity

We make every effort to test our proteins for their in vitro and/or in vivo biological activity. Protein related sheets are periodically updated.

### Sequence

Amino acid sequences of the expressed recombinant proteins are described in this catalog. The extra amino acid residues (e.g. tag sequences) added to the protein's own sequence are underlined.

Procalcitonin	Porcine	E. coli
Procalcitonin	Rhesus	E. coli
Prolactin-Inducible Protein	Human	NATIVE
Proline-Rich Acidic Protein 1	Human	E. coli
Proprotein Convertase Subtilisin/Kexin 9	Human	HEK293
Prorenin	Human	HEK293
Prostaglandin D Synthase D	Human	E. coli
Prouroguanylin	Human	E. coli
Pulmonary Surfactant-Associated Protein B	Human	HEK293
Pyruvate Kinase M2	Human	E. coli
Regenerating Protein 1 alpha	Human	E. coli

## Proteins

Product Name	Species	Source
Regenerating Protein 1 beta	Human	E. coli
Renalase	Human	E. coli
Resistin	Human	E. coli
Resistin	Mouse	E. coli
Resistin-Like Molecule-beta	Human	E. coli
Retinol Binding Protein 4	Human	E. coli
S100A1	Human	E. coli
S100A11	Human	E. coli
S100A12	Human	E. coli
S100A14	Human	E. coli
S100A2	Human	E. coli
S100A7A	Human	E. coli
S100A8	Human	E. coli
S100A9	Human	E. coli
S100G	Human	E. coli
S100P	Human	E. coli
SAP Protein	Human	HEK293
SARS-CoV Nucleocapsid Protein	SARS-CoV	E. coli
SARS-CoV-2 Nucleocapsid Protein	SARS-CoV-2	E. coli
SARS-CoV-2 Glycoprotein S1	SARS-CoV-2	HEK293
SARS-CoV-2 Glycoprotein S1 RBD	SARS-CoV-2	HEK293
Sclerostin	Human	E. coli
Sclerostin	Human	HEK293
Secretoglobin Family 1D Member 1	Human	E. coli
Secretoglobin Family 3A Member 2	Human	E. coli
Serglycin	Human	HEK293
Sex Hormone-Binding Globulin	Human	CHO
sFRP4	Human	HEK293
Soluble Receptor for Advanced Glycation End Products (sRAGE)	Human	HEK294
Soluble Receptor for Advanced Glycation End Products (sRAGE)	Human	E. coli
Soluble Receptor for Advanced Glycation End Products (sRAGE)	Mouse	HEK294
sPLA2-IB	Human	E. coli
sPLA2-IIA	Human	E. coli
sPLA2-IID	Human	E. coli
sPLA2-IIIE	Human	E. coli
sPLA2-V	Human	E. coli
sPLA2-X	Human	E. coli
Stanniocalcin 1	Human	HEK293
Stanniocalcin 1	Mouse	HEK293
Stanniocalcin 2	Human	HEK293
Thyrostimulin beta subunit (Glycoprotein hormone alpha 2)	Human	E. coli
Trefoil Factor 1	Human	E. coli
Trefoil Factor 3	Rat	E. coli
Tubulin Polymerization-Promoting Protein	Human	E. coli
Uromodulin	Canine	NATIVE

Product Name	Species	Source
Uromodulin	Human	NATIVE
Visfatin	Human	E. coli
Visinin-like Protein 1	Human	E. coli
Xylosyltransferase 2	Human	HEK293
Zinc-Alpha-2-Glycoprotein	Human	HEK293

# Purchasing Information and Conditions of Sale

Following the licence agreements made and entered into by BioVendor and its suppliers or licensors, the sale of some products is restricted to certain areas. Since it is not possible to specify this for each product, we cannot guarantee that all products stated in the catalogue are available in all countries. Please check products availability on the website by a selection of the appropriate country or via email at [info@biovendor.com](mailto:info@biovendor.com)

## Ordering

Orders can be placed either by e-mail, phone or post. Please use our website at [www.biovendor.com](http://www.biovendor.com) to order online.

## Distribution Network

BioVendor's products can be ordered all over the world either directly from BioVendor headquarters, BioVendor subsidiaries or from our network of local distributors. Your orders will be forwarded to the office corresponding to your market area.

## Pricing and Payment Terms

Prices are subject to change without notice. Payment terms are 30 days from invoice date. BioVendor does not agree to, and is not bound by, any other terms or conditions that have not been expressly agreed to in writing by a duly authorized officer of BioVendor. Prepayment against a proforma invoice may be required for new customers. The present catalog is intended for use with a supplementary price list. Prices are net and ex-works. Please visit the BioVendor website at [www.biovendor.com](http://www.biovendor.com) and contact BioVendor or our local distributor for the current price list.

## Bulk Quantities

To better serve our customers, BioVendor offers extended sizes for our ELISA kits, proteins and antibodies upon request. Please contact either BioVendor's sales department or our local distributor for alternative quantity options and applicable pricing.

## Shipping

BioVendor reserves the right to select the method of packaging and shipping that best ensures efficient tracking and stability of the product over the course of shipment. Shipping and handling costs are added to the invoice. The use of a purchaser's account number can be arranged only when required by the purchaser. Any damage during shipment is covered by the warranty provided in these terms and conditions according to INCOTERMS 2020.

## Resale Prohibited

In the absence of an expressed written agreement to the contrary, all products sold by BioVendor are for the exclusive use of the purchaser and are not to be resold.

## Product Specifications and Uses

All products are for professional use only. With the exception of those immunoassay kits explicitly marked CE IVD, BioVendor's products are furnished for research use only. They must not be used as drugs, veterinary drugs, cosmetics, agricultural or pesticidal products, food additives or household chemicals.

## Technical Assistance

Contact either BioVendor or our local distributor for technical assistance. Please be prepared to provide all relevant information (problem specification or description, catalog number, lot number, etc.).

## Claims and Returns

Products may not be returned without prior authorization. Contact either BioVendor branches or our local distributor for authorization and instructions. Packaging and products should be inspected immediately upon receipt. Notification of damage, shortage, defects or incorrect shipping should be given immediately by e-mail. Claims against the quality or function of our products should contain the product catalog number, lot number and detailed problem description. Raw data obtained with a product that is the subject to the claim may be required.

## Warranty

All BioVendor's products are guaranteed to meet or exceed specifications as given in our product datasheets when used under normal laboratory conditions. Should any product fail to perform as warranted, upon notification, BioVendor shall promptly replace it, free of charge. BioVendor's obligations and purchaser's sole remedy is limited to such replacement of the product or, at the opinion of BioVendor, refund of the original purchase price.

BioVendor does not make any other warranty or representation whatsoever, whether expressed or implied, with respect to these products. In particular, BioVendor does not make any warranty of suitability, non-infringement, merchantability or fitness for any particular purpose of any product. In no event shall BioVendor be liable for incidental, consequential or punitive damages.
